

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A portable dental treatment system configured to be compacted and bundled such that a relatively fit person can physically carry the portable dental system comprising:
 - at least one dental bracket table;
 - at least one portable base unit including at least one suction pump ~~and a waste container~~;
 - at least one suspension device couplable between said at least one dental bracket table and said at least one portable base unit, said at least one suspension device structured to allow a dental patient chair to be positioned substantially below said at least one dental bracket table.
2. (Previously presented) The portable dental treatment system of Claim 1, wherein said at least one dental bracket table comprises:
 - a bracket tray or a dental hand piece holder.
3. (Previously presented) The portable dental treatment system of Claim 1, wherein said at least one portable bases unit further comprises:
 - at least one air compressor.
4. (Previously presented) The portable dental treatment system of Claim 1, wherein said at least one portable base unit comprises:
 - an enclosure structured to support at least one dental operatory component selected from a group of dental operatory components having an air compressor, a suction pump, an electric motor, a control knob, an electrical switch, electrical circuitry, and a mechanical switch.

5. (Previously presented) The portable dental treatment system of Claim 1, wherein said at least one suspension device structured to allow a dental patient chair to be positioned substantially below said at least one dental bracket table comprises:
 - a curved member operably couplable between a side of said at least one portable base unit and said at least one dental bracket table.
6. (Previously presented) The portable dental treatment system of Claim 1, wherein said at least one suspension device structured to allow a dental patient chair to be positioned substantially below said at least one dental bracket table comprises:
 - a first member operably couplable with a side of said at least one portable base unit; and
 - a second member at least partially transverse to said first member, said second member having a first end operably couplable with said at least one dental bracket table and a second end operably couplable with said first member.
7. (Previously Presented) The portable dental treatment system of Claim 6, wherein said first member operably couplable with a side of said at least one portable base unit comprises:
 - said first member rotatably attachable to the side of the at least one portable base unit.
8. (Previously Presented) The portable dental treatment system of Claim 7, wherein said first member rotatably attachable to the side of the at least one portable base unit comprises:
 - a mounting bracket affixed to the side of said at least one portable base unit, said mounting bracket having a circular opening; and
 - said first member insertable in said circular opening.

at least one dental bracket table and a second end operably couplable with said first member.

9. (Previously Presented) The portable dental treatment system of Claim 6, wherein said second member having a first end operably couplable with said at least one dental bracket table and a second end operably couplable with said first member comprises:
said second member integrally molded with said first member.
10. (Previously Presented) The portable dental treatment system of Claim 6, wherein said second member having a first end operably couplable with said at least one dental bracket table and a second end operably couplable with said first member comprises:
said second member rotatably attachable to said at least one dental bracket.
- 11.-17. (Cancelled)
18. (Currently Amended) A method of assembling a portable dental treatment system configured to be compacted and bundled such that a relatively fit person can physically carry the portable dental system, comprising:
coupling a suspension device between at least one dental bracket table and at least one portable base unit including at least one suction pump ~~and a waste container~~, said suspension device structured to allow a dental patient chair to be positioned substantially below the at least one dental bracket table.
19. (Original) The method of Claim 18, wherein said at least one dental bracket table comprises:
a bracket tray or a dental hand piece holder.

20. (Original) The method of Claim 18, wherein said at least one portable base unit comprises:

said at least one portable base unit containing a device for at least partially driving a dental operatory, the device for at least partially driving including but not limited to an air compressor, a suction pump, or an electric motor.

21. (Original) The method of Claim 18, wherein said coupling a suspension device between at least one dental bracket table and at least one portable base unit, said suspension device structured to allow a dental patient chair to be positioned substantially below the at least one dental bracket table comprises:

operably coupling a first member with a side of the at least one portable base unit; and

operably coupling a second member substantially transverse to said first member such that said second member has a first end operably coupled with said at least one dental bracket table and has a second end operably coupled with said first member.

22-26(Cancelled)

27. (New) The portable dental treatment system of Claim 1, wherein said system includes at least one wastewater bottle.

28. (New) The portable dental treatment system of Claim 1, wherein said system includes at least one clean water bottle.

Amendments to the Drawings

Attached hereto are formal drawings for Fig. 1A through 5F including amendments to Fig. 1A and Fig. 4A. Also attached hereto are annotated sheets showing the drawing changes to Fig. 1A and Fig. 4A. As illustrated, both Fig. 1A and Fig. 4A have been amended to include reference numerals to items depicted but not previously identified. The new reference numerals include:

- 120 first container mounting ring
- 121 second container mounting ring
- 122 net of first container mounting ring
- 123 clean water bottle
- 124 net of second container mounting ring
- 125 waste bottle
